**-Kelly Alton**

My name is Kelly Alton and this is my story. In June of 05' I had a serious back injury with multiple bulging discs. For the past 51 weeks now I have been in and out of doctors' offices and rehab programs repeatedly trying to get relief from my pain and numbness. Nothing worked well for long. The amount of drugs I have taken to try and cope with this pain is enormous and has been very costly. This injury not only kept me out of work but was a burden on my income and family.

As an administrator in a High School it became more and more difficult to accomplish the things I needed to do. Because not only the pain, but also my inability to do my job, I have suffered greatly (both physically and mentally) and fear I have ruined relationships with good friends and co-workers.

It was only after being referred by a former DRX patient and good friend did I finally begin to get

some relief from this pain and numbness I was experiencing prior to coming to this clinic. There were times when my lower leg was so numb that I could hardly walk. At times I would have to see if my foot was in contact with the ground with each step. The results of coming to this clinic and using the DRX 9000 have been no less than amazing. My pain is almost entirely gone and I have little or no numbness.

I believe as I begin my at home exercises and core strengthening I will be totally "pain free" and have "no numbness". I am seeing these results in very few weeks compared to other treatments for almost a year with no good outcome.

These treatments by the DRX 9000 and the excellent staff of the Clinic are a viable alternative to going under "the knife". I would recommend the DRX decompression to anyone. You owe it to yourself before being cut on.
